ABOUT FLUCELVAX® TODAY.

*Compared to the standard flu vaccine. Observational studies have limitations including potential for selection bias, residual confounding. Studies conducted in different seasons with different circulating strains. Studies carried out in either trivalent or quadrivalent formulation; effectiveness results are applicable to both. †Over 5 separate US seasons (2017-20, 2022-24) in people <65 years of age and across different datasets.

Flucelvax® is an inactivated influenza vaccine, prepared in cell cultures. Flucelvax® is an unfunded Prescription Medicine, charges will apply. Flucelvax® is for the prevention of influenza in adults and children aged 6 months of age and older. Each dose of Flucelvax® Quad contains 60 micrograms/0.5 mL of surface haemagglutinin and neuraminidase from four influenza virus strains, type A and B. Each dose of Flucelvax® contains 45 micrograms/0.5 mL of surface haemagglutinin and neuraminidase from three influenza virus strains, type A and B. Flucelvax® has risks and benefits. Ask your doctor or healthcare professional if Flucelvax® is right for you. Side effects include injection site reactions such as pain, redness, swelling or formation of hard lumps and bruising; muscle aches or joint pain; flu-like symptoms such as headache, fatigue, fever, chills, cough, sore throat, runny or blocked nose; nausea, vomiting, diarrhoea and loss of appetite. Serious side effects include Guillain-Barré syndrome (feeling weak, numbness and tingling in your limbs). Tell your healthcare professional if you have ever had an allergic reaction to any vaccine or to any of the listed ingredients for Flucelvax®. If you have side effects after being given Flucelvax®, talk to your healthcare professional. Additional product consumer information on Flucelvax® is available from www.medsafe.govt.nz; Seqirus, Auckland or 0800 502 757. Flucelvax® is a registered trademark of Seqirus UK Ltd and its affiliates. Seqirus, Auckland. 10/24. NZ-FLU-25-0038. TAPS NP23854. INSIGHT 13720
